MISSION

Gagarin is not just the name of the first man in space, it symbolizes the beginning of the space age. Gagarin's flight is the embodiment of advanced technology and well-coordinated work of a huge team of experts in various fields.

Vostok, on which Yuri Gagarin flew, became the first manned spacecraft in a line of future space launches. Yuri Gagarin paved the way for people into space, and now we are doing similar things, attracting new users and projects to the crypto world. That is why our platform is called GAGARIN.

GAGARIN isn't just a launchpad. It is an automated decentralized platform of the future which enables private investors to carry out their activities as efficiently as possible without being distracted by routine tasks. It enables experts to use their skills and get new clients, it helps projects raise funds, find investors, partners and contractors, thus creating an open startup market.

PROBLEMS

Despite the volatility of the crypto market in the spring of 2022, the blockchain project market has resisted and is now showing steady growth. Since the beginning of 2022, hundreds of projects have already been launched, and this number will constantly increase. Crypto projects, in terms of technology, are still only at the beginning of their development, but their involvement in economic and social life is becoming more significant.

We are convinced that there will be more and more new projects, and the ideas implemented ideas will be more daring and fantastic. Not only crypto enthusiasts, but also institutional investors have already appreciated the prospects of the new industry.

Currently, there is the typical approach to raising investment funds by blockchain projects. It consists of private token sale rounds mainly for foundations, and a public token sale round through launchpads.

The approach is primarily focused on interaction with professional investors.

However, it cannot use the investment potential of private non-professional investors in public rounds.

The reasons are as follows:

Low volume of token supply in public rounds compared to private rounds

High barriers to enter the market for private investors in terms of needed knowledge

The almost total lack of private investor activities automation

The result is a paradoxical situation. On the one hand, private investors have quite a large amount of free funds to invest and few have not heard about cryptocurrency projects. In addition, many own the tokens of various projects, which they acquire mainly on centralized exchanges. On the other hand, a very small number of private investors and those who are interested in the cryptocurrency market in general participate in public startup investment rounds.

Despite this, the existing platforms for public rounds of investment in projects (launchpads) reveal the potential of private investors very poorly. The launchpad market is oversaturated with identical solutions with similar functionality, centralization and weak automation. The investment process requires constant user involvement, such as tracking projects, token transfer dates, manual payment operations, token branding, etc. All of this leads to a high percentage of divestment. The lack of investor automation hinders the influx of new investors who do not rely on investing in crypto-startups as their main source of income. This is a problem for both fundraising projects and the market.

APPROACH TO SOLVING THE PROBLEMS

A typical launchpad is a decentralized platform useful for both crypto startups and users who want to invest their funds in crypto. A launchpad allows users to participate in public token sales rounds (IDO - Initial Dex Offering) of projects placed on it. Before tokens enter the free market, where their price is usually higher than that of investment rounds. Moreover, a launchpad is represented by a community of investors who must own internal launchpad tokens in order to gain access to IDOs.

Launchpads, in their classic sense, do not solve the problems described in the previous section, as investors still need to dive into the terminology and learn the technical details to start investing.

The community, which often understands the market well, does not participate in project evaluation, and promising projects cannot always get a place on launchpads. Therefore the typical launchpads do not attract a huge target audience which is interested in crypto.

The launchpad of the future should do more than just provide investment-raising services to projects. It should be efficient and comfortable for all concerned parties. This would create additional value. Along with the standard functionality, the launchpad of the future must enable.

INVESTORS TO

Invest in the best projects selected by a professional expert community

Make money without spending time on in-depth study of the subject

Save time on the investment process in favor of making effective investment decisions

Keep up to date with all current events and investment opportunities

Get the necessary amount of information and analytical tools to make an investment decision

Maximize efficiency and income from owning the tokens of the launchpad

Participate in decision making and launchpad development, by earning bonuses from the launchpad

PROJECTS TO

Raise investment

Take advantage of GAGARIN incubation tools for a successful launch

Get an analysis (opinion) from the professional expert community

Get in touch with the expert community and order the services they need

Get a marketing campaign to promote the project, including AMA sessions and new partnerships

Attract new members to their community

EXPERTS TO

Join the professional community

Earn money and other benefits by providing expertise using services of the launchpad

Get clients

Develop networking

ALLOCATION

We are creating GAGARIN in order to solve all the problems described above. GAGARIN implements the basic mechanics of a typical launchpads and also creates additional value for everyone involved in investing. This is exactly what the launchpad of the future should do.

Any project can apply for an IDO. Once the application has been reviewed and accepted by GAGARIN experts, the project will be placed on the Launchpad.

In order to participate in the IDO an investor must be a member of the tier. A tier is a certain group of investors formed according to the number of locked tokens of the Launchpad. Tiers determine the type of investor allocation, its volume, and also provide investors with additional features, such as staking, automated investing tools and opportunity to avoid mandatory social activities.

An investor needs to have enough Allocation Power to get a tier. Allocation Power (AP) is the amount that a user must accumulate to get a certain investor tier. There are several ways to get Allocation Power:

Provide liquidity to official GAGARIN liquidity pairs

Stake GGR tokens into GAGARIN official pools

Invest in the GAGARIN private round

In the case of staking and investing, 1 AP equals one locked or invested GGR token. For providing liquidity, different rules apply: depending on the pair, you get a different number of APs.

Basically, 1 LP token = $2 * k$ GGR tokens (where $k > 0.75$ is the pair correlation coefficient).

Allocation is the number of project tokens (IDO) allocated to the investor for redemption. There are three types of allocation on GAGARIN - guaranteed, lottery and guaranteed dynamic allocation.

GUARANTEED ALLOCATION

an investor has a 100% probability of receiving a certain amount of allocation.

LOTTERY

an investor enters the lottery pool after submitting an application. The allocation will be randomly drawn in the pool, taking into account the limited winning places. In other words, the investor will get the allocation if he/she is lucky

GUARANTEED DYNAMIC ALLOCATION

*an investor receives allocation, but the more AP he/she has, the more allocation he/she will get compared to the minimum within the tier (up to the maximum of double minimum allocation (x2), where AP = minimum tier threshold — x1, AP = minimum tier threshold * 10 — x2)*

Tokens redeemed in the private round are counted as part of the tier until they are fully transferred to the investor. That is, after the TGE and the distribution of 10% of tokens to investors, only the remaining 90% which the project must distribute to users will be included in the tier.

SMART INVESTING

The key feature of GAGARIN is the smart investing system, which requires much less action to invest compared to other launchpads. This significantly reduces the entry barrier for private investors and leads to an increase in their number.

A notification bot is an important part of the Lazy Investing System.

- ★ *The investor only needs to adjust the Lazy Investing System to their own goals in their personal account, connect the bot and lock the desired amount of funds for investments*
- ★ *After that, the bot will regularly send information about ongoing IDOs, changes in statuses, receipt of redeemed project tokens and so on*
- ★ *The user will be able to decide whether to participate in an IDO either via the GAGARIN platform or using the bot*
- ★ *If the user does not refuse to participate in IDO, the Lazy Investing System will do the work for them: it will apply for participation, make the redemption at the expense of the budget, play FCFS and get the tokens. The investor will only have to concentrate on making investment decisions and receive profits*

On our Launchpad, we want to simplify the opportunity of investing down to classic instruments of the traditional non-crypto market — no more keeping track of whitelist dates, worrying about swap, FCFS, endlessly claiming tokens, going into the specifics and learning the terminology. The smart investing system will do everything for you.

Below is a comparison of the common investment process on the typical launchpad and that on the GAGARIN Launchpad which integrates the smart investing system

The smart investing system greatly facilitates the process of investor-project interaction. An investor no longer wastes energy and time doing research, scrutinizing projects, no longer tracks switching stages and claims for maximizing profits and no longer lives in calendars. All an investor does on the GAGARIN Launchpad is log in, top up his investment budget, manage their investments using the notification bot and automatically receive tokens.

INVESTOR PROTECTION PROGRAM

First of all GAGARIN launchpad takes care of investors, the safety of their money, and their profits. No matter how promising the projects are, one can speak about their success only after performing at a certain distance.

On the GAGARIN launchpad, we are changing the concept of investing in IDO from a random lucky/unlucky lottery to a stable way to earn money without unnecessary risks and capital losses. To achieve this, we have developed two "Investor Protection Programs" that allow you make investment decisions after the launch of the project, as well as return invested funds based on the results of the project over the long run.

There are 2 programs — basic and advanced:

- ★ **The basic protection program** allows investors to make a final investment decision after the listing of the project. Investor makes a choice to receive project tokens or return the invested funds in full within 2 hours after the listing of the project
- ★ **The advanced protection program** includes the basic program and, in addition to the possibility of a refund in the first hours after the listing, provides the opportunity to return the invested funds during the entire vesting period. The GAGARIN launchpad monitors the price of the project token and the amount of liquidity and if the price of the project token after one of the claims falls below the price of IDO, the investor will be able to return the invested funds in an amount equivalent to the number of locked project tokens (tokens that the investor has not yet received). Moreover, investors will be able to return the project tokens in the amount of the last claim, thereby increasing the number of locked tokens, and, accordingly, the funds to be returned

The launchpad of the future takes care of all participants in the investment process, including each individual investor. Each investor has his own investment strategy — someone believes in projects and invests for a long time, someone is waiting for quick X's and someone wants to see more liquidity at the start. GAGARIN launchpad gives everyone the opportunity to change their mind if the project does not perform well enough or does not meet the investor's expectations.

Realize your investment dreams without the risk of capital loss with GAGARIN launchpad!

STAKING

GAGARIN has various stacking pools that allow the Launchpad users to gain access to its functionality, such as participation in IDOs, project placement or voting. This is achieved by freezing some of the user's GGR tokens. In addition to utilitarian purposes, some pools credit frozen tokens with APR, which enables users not only to interact with the platform, but also to get profit multiplying their assets.

As mentioned earlier, GAGARIN provides the investor with four types of staking pools:

FIXED POOL

A pool in which the investor receives the maximum gain, both in AP and APR, but with a lock for a certain period and a restriction on stake withdrawal before the end of the lock

APR	LOCK	AP	WITHDRAWAL FEE BEFORE UNLOCK
7%	2 weeks	1 GGR = 1 AP	30%
10%	1 month		
15%	3 months		
25%	6 months		
40%	1 year		

FLEXIBLE POOL

a pool with no limit on stake input/withdrawal, but providing less AP per GGR and less APR

APR	LOCK	AP	WITHDRAWAL FEE BEFORE UNLOCK
7%	—	1 GGR = 0.5 AP	—

COMMUNITY POOL

a pool with no restrictions and no accrual of AP, suitable for those who wish to receive a yield in GGR tokens without using the functionality of GAGARIN

APR	LOCK	AP	WITHDRAWAL FEE BEFORE UNLOCK
25%	—	1 GGR = 0 AP	30%

LIQUIDITY POOL

LP-token staking (liquidity pair with the platform token e.g. GGR-BNB)

APR	LOCK	AP	WITHDRAWAL FEE BEFORE UNLOCK
14%	2 weeks	1 LP = 2 * k AP, where k > 0.75 — pair coefficient	30%
20%	1 month		
30%	3 months		
50%	6 months		
80%	1 year		

* Interest rates are given to illustrate the operation of the stacking mechanism. The exact APR rates will be determined when creating pools.

In addition to pools for investors, there is also an IDO pool — a special pool without yield and AP accrual, required for projects that want to freely get listed on GAGARIN.

Staking also works for early investors. Any tokens purchased within a private investment round are automatically put into a fixed staking pool. In other words, by buying GGR tokens in the private round, the investor not only receives AP, but also increases the number of their tokens until they are distributed. Furthermore, the bonus comes into effect from the moment of investment in GAGARIN. The earlier a user invests, the more profit they receive during the allocation of tokens.

Additionally, bonuses involve daily auto-compounding (reinvestment). In other words, the APY (annual percentage yield), also known as the Effective annual rate of return (EAR), rather than the APR, will be taken into account. The bonus is added to the total sum daily for an even bigger bonus. The APY takes compound interest into account, while the APR does not.

THE FORMULA TO CALCULATE APY

$$APY = \left(\left(1 + \frac{APR}{n} \right)^n \right) - 1$$

Where n is the annual number of reinvestments

THE APY FOR EARLY INVESTORS WILL BE ~ 16,18%

$$16.18\% = \left(\left(1 + \frac{15\%}{365} \right)^{365} \right) - 1$$

Example: an investor invested 10000 GGR at 15% APR. To calculate the sum on any day after investing, let us use the formula

$$X = D * \left(1 + \frac{APR}{n} \right)^{n * y}$$

X is the sum

D — an initial deposit

n — the annual number of accrual reinvestments

y — the time passed in years (to calculate in days one can use the following: $1 / 365$)

The total amount of tokens on the next day is

$$10000 * \left(1 + \frac{15\%}{365} \right)^{\left(365 * \left(\frac{1}{365} \right) \right)} = 10004.10959 \text{ GGR}$$

Thus, on the first day, the investor will have **10004.10959 GGR**, on the second day — **10008.22087 GGR**, on the third day — **10012.33383 GGR** and so on. Notice that the amount of income grows each day due to reinvestment, rather than remaining static (**4.10959 GGR**, **4.11128 GGR**, **4.11296 GGR**, and so on)

All tokens (purchased and received as bonuses) will be counted while tier distribution.

After TGE, when the time comes to distribute tokens according to tokenomics, bonus tokens will also be counted. Distributions will take place proportionally according to the schedule, moreover, tokens will still be counted in tiers and will be credited with APR.

For example, a user has invested **10000 GGR** and has accumulated **11000 GGR** by the time of TGE. The first distribution according to tokenomics is **10%**, i.e. the investor will receive **1000 GGR** from the invested funds and **100 GGR** from the accumulated interest (**a total of 1100 GGR**). The next distribution occurs in a month at **7.5%**. At the beginning of the period, the investor has **9000 GGR** of invested volume and **900 GGR** of interest (**total of 9900 GGR**). According to the formula above, in **30 days** (a month) the investor will accumulate

$$9900 * \left(1 + \frac{0.15}{365}\right)^{\left(365 * \left(\frac{30}{365}\right)\right)} = 10022.78 \text{ GGR}$$

Where **9000 GGR** is the rest from the initial investment and **1022.7849 GGR** is the accumulated interest. In this case, the payout will be **835.23 GGR**, where **750 GGR** is the payout from the original investment of **7.5%** and $1022.7849 * 7.5 / 90 = 85.23 \text{ GGR}$. In another month, the investor will have **9301.49 GGR** and the payout will be **750 GGR + 95.59 GGR** and so on.

DECENTRALIZED FRAUD PROTECTION

The GAGARIN launchpad of the future not only facilitates the investment process, but also takes care of the projects. We understand that projects have to go through a serious selection process in order to get listed on the popular launchpads. On the one hand, this ensures a certain level of projects, but on the other hand, the community of investors is losing a large number of promising projects. In our opinion, every bona fide startup should have an opportunity to assert itself on the launchpad of the future.

GAGARIN provides any project with a chance to launch its IDO by locking up GGR tokens at the time of the IDO. This mechanism will make it possible to use locked tokens as a collateral to prevent fraud by projects and provide the necessary level of trust in projects from investors. As a result, this will increase both the number of projects and token utility.

Projects that have filled out the questionnaire and locked tokens can be listed on GAGARIN. The expert group publishes their assessment of the project and marketing team provides promotion. All of the IDO activity and progress statistics are displayed in the project's personal account. GAGARIN's smart contract system provides automation and transparency of most IDO processes, e.g. token distribution, receiving the funds raised, applications.

After completing the application, the launchpad calculates the amount of GGR tokens to be locked into the GAGARIN IDO pool. It depends on the desired amount of fee to be collected during the IDO, and the amount of the platform's insurance obligations. The GGR token locking procedure serves as a protection against spam and is designed to increase the utility of the token, which ultimately has a positive impact on the profits of its holders.

Before the token allocation stage begins, a project has to transfer its tokens to the GAGARIN smart contract. The tokens are transferred to investors' wallets via GAGARIN's internal mechanics and in accordance with the desired schedule.

In case the project violates the announced IDO conditions or resorts to fraudulent practices, a certain amount of GGR tokens will be deducted from the project's stake. In addition, investors have the opportunity to demand a refund.

After all IDO procedures are completed, the GGR tokens contributed by the project are unlocked and the project can take them back.

The free listing of staking projects is intended to provide initial investor confidence in projects and determine the mechanics of slashing. At the same time, the GAGARIN expert team is constantly negotiating with projects whose reputation is unquestionable. Therefore, GAGARIN reserves the possibility of listing projects without staking in case they have undergone a thorough peer review.

DAO

The decentralized nature of the launchpad of the future means that it is a decentralized autonomous organization with an appropriate type of governance.

On GAGARIN, all interested users can participate in the activities and development of the platform. They can make decisions about platform fees, staking profitability, choosing a project for listing, deciding of refunds and so on.

In order to participate in governance, the user needs to stake tokens in one of the GAGARIN staking pools. The number of user votes depends on the number of locked GGR tokens — the more locked tokens, the more influential the vote. The maximum number of votes is equal to the number of GGR tokens in free circulation.

In addition, part of the platform's profit will be distributed among DAO participants (holders of GGR tokens) in accordance with the staked amount, consisting of commissions for running IDO, income from incubation tools, additional services and other sources.

A decentralized approach will ensure the development of GAGARIN in accordance with the opinion of its investors, being an additional guarantee of the safety of invested funds, and will also ensure additional utilization of the GGR token.

INCUBATION

The success of the GAGARIN launchpad directly depends on the success of the launched projects, so we try to select only the best projects and help them with the launch as a whole. GAGARIN Incubation Center is an automated products and services of market professionals for the successful launch of crypto-startups.

GAGARIN Incubation Center offers projects:

- ✦ *running IDO and INO on the GAGARIN launchpad*
- ✦ *incubation tools line*
- ✦ *professional promotion and launch services*

RUNNING IDO AND INO

The basic services of the GAGARIN Incubation Center are IDO and INO. The GAGARIN Launchpad invites projects to run public sales with us. Raise funds for IDO and INO and promote your project in the GAGARIN community

INCUBATION TOOLS LINE

All crypto startups, one way or another, go the same way from idea to launch — they raise investments, launch staking pools, distribute tokens, and so on. For the listed typical operations, projects, as a rule, develop their own technological solutions, which takes time and resources that could be spent on the implementation of the project itself. The GAGARIN Incubation Center offers projects a set of automated products to solve typical turnkey tasks:

Fundraising — a tool for collecting investments from the project community

Staking — a tool for creating and customizing the staking program of a project token

Distribution — a tool for instant distribution of tokens

Vesting — a tool for distributing project tokens by vesting

The main features of the GAGARIN incubation product line are:

- ★ **Embeddability** — the end user interface of each tool can be embedded directly on the project website or applications in one click
- ★ **Customization** — the interfaces and mechanics of the tools are fully customizable and can be adjusted to any project needs
- ★ **Multichain** — tools work in several networks right out of the box
- ★ **Security** — all tools are based on smart contracts, no one except the project has access to settings and tools

ADDITIONAL SERVICES

During their launch, crypto startups face not only technical problems, but also a set of typical activities that are vital for any launch. GAGARIN combined its experience and the experience of market professionals who became GAGARIN partners to provide projects with a full range of services for launching in different directions:

- ★ **Marketing**
- ★ **Market making and listing**
- ★ **Audit**
- ★ **Consulting and financing**
- ★ **Software development**

GAGARIN — everything that projects need
for a successful launch!

EXPERTS

The success of any blockchain depends on high-quality and ambitious projects, which must be carefully selected and verified. GAGARIN was launched by a team of professionals who, over more than 5 years in the blockchain market, has accumulated unique experience for studying and tracking projects. We understand that human resources are crucial, and many projects suffer from their lack or incompetence. However, we are sure that there are many professionals on the market. Therefore, GAGARIN offers a simple yet elegant solution to bring together professionals and projects, as well as provide investors with the technical expertise of an alliance of professionals who partner with the platform.

Experts, projects and investors are users of the platform and members of the community, so the main goal of GAGARIN is to create a large and active community while meeting the interests of all three categories of market participants:

- ★ *Through partnership with the platform, experts will gain access to the client base and the opportunity to join promising projects*
- ★ *By choosing GAGARIN as a Launchpad, projects will have access to expert evaluations and the assistance they need for successful launch and promotion*
- ★ *By joining the platform, investors will be able to make rational investment decisions based on the professional evaluation of the expert community*

GAGARIN will develop an expert exchange which is a social system for experts containing publications and rankings where they will be able to

- ★ *Get access to private chats with potential clients*
- ★ *Create their own public profile*
- ★ *Receive remuneration from GAGARIN in tokens*
- ★ *Publish reports*

In the GAGARIN expert exchange, professionals create their own profiles, describe their experience and leave contacts. They can then publish their opinions, analyses and reports on the projects they are launching. The GAGARIN community can rate the submitted analytics and the best work is rewarded with GGR tokens. Additionally, any verified expert has access to a community of experts and project communications to develop their networking and attract new clients.

TOKEN

\$GGR is a native token of the GAGARIN ecosystem. It plays a key role in both future and existing functions of the platform through incentives and management, and is a major security tool.

\$GGR is the multichain token listed on several networks. The total supply of \$GGR is 100,000,000. The \$GGR token provides:

Access to the GAGARIN platform, its features and capabilities

The opportunity to run IDOs on the GAGARIN platform

The opportunity to participate in IDOs on the GAGARIN platform

The opportunity to participate in governance, namely to make proposals to add, modify or delete features of the platform, vote for them and be rewarded for it

Access to the functionality of all future projects in the GAGARIN ecosystem

The the opportunity to get the appropriate tier to participate in IDOs

The opportunity of staking tokens and being rewarded for it

There are many ways to get \$GGR tokens. You can get them as staking rewards by participating in token sales or, if you are lucky, get them as airdrop to your wallet.

TOKENOMICS

The main feature of GAGARIN compared to the tokenomics of other cryptocurrency projects is the high number of initially generated tokens for the public round. Users receive a significant portion of the tokens acquired during the public round at the moment of issue. In this case, private investors get access to IDO in no time.

The main features of GAGARIN tokenomics compared to other crypto market projects are the low initial market capitalization, where most of the tokens will be allocated by the project as liquidity, and the high utility of tokens. GGR token holders not only get access to IDO and INO, but also take part in the management of the platform, receiving a part of the profit generated by the launchpad, a line of incubation tools and additional services.

The user can only receive tokens:

- ★ *Having participated once in sales rounds*
- ★ *As a reward for staking or providing liquidity*
- ★ *On the secondary market*

There are no other ways to get tokens. So the more projects want to run an IDO and the more private investors want to participate, the greater the demand for the token.

The marketing and ecosystem costs are designed to meet all needs for at least two years after TGE, while eliminating the possibility of large one-time expenditures.

The project team, partners, and advisors are being motivated over a longer period of time. The execs don't receive tokens at all when they are issued, but the amount of tokens received increases over time, which creates motivation to develop the project over the long term.

The platform also provides treasury due to open in 18 months and funds for the liquidity pool, which will be used for basic market-making and pairing on decentralized exchanges (DEX).

In order to reduce the issuance of GGR tokens and increase the value of tokens, GAGARIN has a token burning mechanism. As a rule, those GGR tokens are burned which constitute a part of the launchpad fees and insurance payments of startups. The amount of this part of tokens is determined by the DAO voting.

Distribution	Percentage	Amount, GGR	Price	Soft cap	Hard cap	TGE Percentage	TGE Amount, GGR	Initial market cap	Vesting
Seed *	6,00%	6 000 000	\$0,060	\$360 000	\$360 000	10,00%	600 000	\$36 000	10% at TGE, then in equal installments every month for 18 months
Private sale *	6,32%	6 315 789	\$0,095	\$250 000	\$600 000	10,00%	263 158	\$25 000	10% at TGE, then in equal installments every month for 12 months
Public sale *	0,77%	769 231	\$0,130	\$50 000	\$100 000	25,00%	96 154	\$12 500	25% at TGE, then 12,5% every month onward
Team	5,00%	5 000 000	—	—	—	—	—	—	100% at month 24
Advisors & Partners	5,00%	5 000 000	—	—	—	—	—	—	10% at month 6, 8 and 12, 15% at month 15, 18 and 21, 25% at month 24
Marketing	20,00%	20 000 000	—	—	—	—	—	—	5% at month 3, then 5% every month onward
Ecosystem	20,00%	20 000 000	—	—	—	—	—	—	5% at month 3, then 5% every month onward
Treasury	33,91%	33 914 980	—	—	—	—	—	—	50% at month 18, then in equal installments every months for 10 months
Liquidity	3,00%	3 000 000	—	—	—	50,00%	1 500 000	\$195 000	50% at TGE, then in equal installments every months for 5 months
		100 000 000		\$660 000	\$1 060 000		2 459 312	\$268 500	

* All unsold tokens from the sale rounds will be burned. Total market capitalization will be reduced by the volume of burned tokens

THE TOKEN'S UTILITY

Token stability is one of the most important elements of platform success. We believe that artificial token maintenance by creating a market is not profitable in the long run. GAGARIN's approach is a practical application. If the token is in demand by people for real tasks, it will be stable.

The GGR token is both utilitarian - involved in tokenomics, and governing - involved in the DAO mechanism.

Staking tokens to the GAGARIN pools is the main mechanism for their usage. Depositing tokens to the pools is necessary both for investors to access the platform's capabilities and for projects to run IDO. This doubles the utility of GGR compared to typical launchpads where users only need the token to gain access to IDOs.

After the decentralization of the platform is achieved, the most important part of the token utilization will be launched — the distribution of a part of the launchpad profit, including profit from additional products and services between DAO participants. Thus, the owners of the GGR token will be even more interested in the quality management of the platform with the help of DAO, since the income from owning tokens will directly depend on effective decision-making within the ecosystem — from choosing projects for listing to changing staking rewards.

Increasing utility is beneficial to all participants. Statistics show that the price of launchpad tokens is rapidly falling. However, on the GAGARIN platform, the need to lock tokens will lead to a decrease in volatility. Locked assets in GGR tokens will not lose much in value, and will still bring utilitarian benefits.

The GAGARIN tokenomics model, using the natural demand creation mechanism, is able to ensure the stability of the token over a long period. Further development of the project implies the creation of new launchpad features using GGR to expand and maintain overall utility.

LAUNCH

Like a spacecraft passing through all the layers of the atmosphere on its way, the GAGARIN platform, which aims to become the launchpad of the future, passes through different stages: Troposphere, Stratosphere, Mesosphere, Thermosphere and Exosphere.

TROPOSPHERE

The release was on April 14, 2022

The first release of Troposphere gives a start to the GAGARIN platform. As part of the release, the launchpad's basic functionality is activated, namely:

- ★ Projects have the opportunity to launch their IDO by submitting an application and selecting the main expert team
- ★ Investors can participate in IDO without restrictions under the rules of lottery allocation
- ★ Guaranteed allocation can be obtained by participating in competitions or investing in the GAGARIN private round

STRATOSPHERE

The release is scheduled for June 15, 2022

The release of Stratosphere aims to motivate GAGARIN early investors and simplify investment mechanics. This release includes:

- ✦ The release of special investor tiers allowing early investors access to guaranteed project allocations
- ✦ The release of INO

The only way to get Allocation Power as part of the release is to invest in the GAGARIN private round. Allocation power indicators are as follows:

MESOSPHERE

The release is scheduled for January 31, 2023

The release of Mesosphere is the most important, as it will allow the GAGARIN platform to break out of Earth's gravity on its way to outer space. As part of it:

- ★ A TGE will be organized on several blockchain networks
- ★ Listing on DEX will take place
- ★ Official staking pools will be released
- ★ The investor tiers will be finalized
- ★ The first products of the incubation tools line will be launched
- ★ The first version of DAO will be launched

THERMOSPHERE

The release is scheduled for June 15, 2023

The release of Thermosphere will define the decentralized nature of the platform. It will include:

- ✦ *Decentralized fraud protection and independent project listing*
- ✦ *Launch of token burning mechanism*
- ✦ *Expanded support of different blockchain networks*
- ✦ *Full line of incubation tools released*

EXOSPHERE

The release is scheduled for September 7, 2023

The final release of Exosphere will take GAGARIN into outer space. As part of the release:

- ✦ *Launch of the expert exchange*
- ✦ *GAGARIN Governance will be launched, and the platform itself will be rightfully called DAO*
- ✦ *GAGARIN will begin to be managed by its community, and all decisions will be made by the collective intelligence of investors, projects, and experts interested in success*
- ✦ *Part of the profit from the activities of the launchpad, the line of incubation tools and additional services will be distributed among all DAO participants*

STRATEGIC PARTNERS

VCs & PARTNERS

CONCLUSION

We are developing the GAGARIN platform, because what is frozen will inevitably lose in life's race against time. We believe that continuous technical improvement of the decentralized platform, the introduction of new approaches and automated tools is the strategy that will not only become the solution of the future, but opens the way for many projects and teams.

We set out to create a convenient and reliable tool, which will be available to any Internet user. Our task is to make investing in crypto projects as simple and understandable as paying for mobile phone services. And then, perhaps, GAGARIN will become the same name in the world of investments as the name Xerox in relation to copying documents.

The interaction of platform users revolves around the GGR token, so our second main task is to increase its value. Tokenomics is the backbone of blockchain projects and we are striving to make GAGARIN tokenomics harmonious, stable and reliable.

Being right here right now, we are looking into the future. We have no idea what it will be like or whether we are bound for success, but we are saying the same thing that Yuri Gagarin said before flying into the unknown — Let's go!

— Let's Go! / Poekhali!
